# This Product Uses Lead (Pb) Free Solder Printed Circuit Boards (PCBs).

Information regarding Lead-Free (PbF) solder:

#### Distinction of PbF PCB:

PCBs (manufactured) using lead free solder will have a PbF mark following the PCB part numbers in a label on the PCB.

#### Caution:

- Pb free solder has a higher melting point than standard solder; typically the melting point is 50 70 °F (30 40 °C) higher. Please use a soldering iron with temperature control and adjust it to 700±20 °F (370±10 °C). Exercise care while using higher temperature soldering irons, do not heat the PCB for too long to prevent solder splash or damage to the PCB.
- Pb free solder will tend to splash when heated too high (about 1100 °F/600 °C).
- ECO SOLDER M705 (available from Senju Metal Industry Co., Ltd.: URL: http://www.senju-m.co.jp) is recommended when repairing PbF PCBs.

# **Important Notice**

Please read this notice completely **BEFORE** installing any optional accessories. As failure to properly install the additional board or connector with the power ON (only the front power switch Off) could damage the copier's SPC or SC board.

Please follow the instructions below:

- 1. It is essential that you turn OFF power to the Main Power Switch located in the rear of the copier.
- 2. It is essential that you unplug the Main AC Power Cord from the wall outlet.
- 3. Please carefully read the installation instructions and follow each step.

Note 1:

The Main Power Switch location may differ slightly depending on the model.

Note 2:

O = Power OFF, I = Power ON

#### Note:

If the Hard Disk Drive Unit is installed, to prevent a Disk Scan Function from being performed (similar to when the power is abruptly interrupted to the PC), it is important to follow the step sequence below when turning OFF the Power Switches on the machine.

- 1. Turn the Power Switch on the Left Side of the machine to the OFF position first.
- 2. Wait approximately 10 seconds while the machine writes the closing status onto the Hard Disk Drive Unit.
- 3. Turn the Main Power Switch on the Back of the machine to the OFF position. (This interrupts all the power to the machine, but does not disconnect the main line.)
- 4. Unplug the AC Power Cord to shut the power Off completely.

### **Precautions**

### For Your Safety

To prevent severe injury and loss of life, read this section carefully before servicing the Panasonic machine to ensure proper and safe operation of your machine.

Please ensure that the machine is installed near a wall outlet and is easily accessible.

■ This section explains the Warnings and Cautions used in the machine and/or this manual.

WARNING: Denotes a potential hazard that could result in serious injury or death.

**CAUTION:** Denotes hazards that could result in minor injury or damage to the machine.

■ This section also explains the Warnings and Cautions used in the machine and/or this manual.

These symbols are used to alert operators to a specific operating procedure that must not be performed.

These symbols are used to alert operators to a specific operating procedure that must be emphasized in order to operate the machine safely.

### **WARNING**

### **Power and Ground Connection Cautions**

Ensure that the plug connection is free of dust. In a damp environment, a contaminated connector can draw a significant amount of current that can generate heat and eventually cause fire if left unattended over an extended period of time.

Always use the power cord provided with your machine. When an extension power cord is required, always use a properly rated cord.

• 120 V/15 A or AC 220 - 240V/10 A

If you use a cord with an unspecified current rating, the machine or plug may emit smoke or become hot to the touch.

Do not attempt to repair, pull, bend, chafe or otherwise damage the power cord. Do not place a heavy object on the cord. A damaged cord can cause fire or electric shocks.

Never touch a power cord with wet hands. Danger of electric shock exists.

If the power cord is damaged or insulated wires are exposed, contact your Service Provider for a replacement. Using a damaged cord can cause fire or electric shocks.

Stop operation immediately if your machine emits smoke, excessive heat, unusual noise, or abnormal smell, or if water is spilt onto the machine. These conditions can cause fire. Immediately switch Off and unplug the machine, and contact your Service Provider.

Do not disconnect or reconnect the machine while the power switch is in the On position. Disconnecting a live connector can cause arcing, consequently deforming the plug and cause fire.

When disconnecting the machine, grasp the plug instead of the cord. Pulling on a cord forcibly can damage it and cause fire or electric shock.

When the machine is not used over an extended period of time, switch it Off and unplug it. If an unused machine is left connected to a power source for a long period, degraded insulation can cause electric shocks, current leakage or fire.

Be sure to switch Off and unplug the machine before accessing the interior of the machine for cleaning, maintenance or fault clearance. Access to a live machine interior can cause electric shock.

Once a month, unplug the machine and check the power cord for the following. If you notice any unusual condition, contact your Service Provider.

- The power cord is plugged firmly into the receptacle.
- The plug is not excessively heated, rusted, or bent.
- The plug and receptacle are free of dust.
- The cord is not cracked or frayed.

### **Operating Safeguards**

Do not touch areas where these caution labels are attached to, the surface may be very hot and may cause severe burns.

Do not place any liquid container such as a vase or coffee cup on the machine. Spilt water can cause fire or shock hazard.

Do not place any metal parts such as staples or clips on the machine. If metal and flammable parts get into the machine, they can short-circuit internal components, and cause fire or electric shocks.

If debris (metal or liquid) gets into the machine, switch Off and unplug the machine immediately. Operating a debris-contaminated machine can cause fire or electric shock.

Do not try to alter the machine configuration or modify any parts. An unauthorized modification can cause smoke or fire.

### Consumable Safeguards

Never dispose of toner, toner cartridge or a waste toner container into an open flame. Toner remaining in the cartridge can cause an explosion, burns and/or injuries.

Keep button batteries/stamp out of the reach of children. If a button battery/stamp is swallowed accidentally, get medical treatment immediately.

### **^**

### **CAUTION**

#### **Installation and Relocation Cautions**

Do not place the machine near heaters or volatile, flammable, or combustible materials such as curtains that may catch fire.

Do not place the machine in a hot, humid, dusty or poorly ventilated environment. Prolonged exposure to these adverse conditions can cause fire or electric shocks.

Place the machine on a level and sturdy surface that can with stand. If tilted, the machine may tip-over and cause injuries.

When relocating the machine, remove the toner and/or developer, and pack the machine with proper packing materials for shipping.

When moving the machine, be sure to unplug the power cord from the outlet. If the machine is moved with the power cord attached, it can cause damage to the cord which could result in fire or electric shock.

### **!** CAUTION

### **Operating Safeguards**

Do not place a magnet near the safety switch of the machine. A magnet can activate the machine accidentally, resulting in injuries.

Do not use a highly flammable spray or solvent near the machine. It can cause fire.

When copying a thick document, do not use excessive force to press it against the scanning glass. The glass may break and cause injuries.

Never touch a labelled area found on or near the heat roller. You can get burnt. If a sheet of paper is wrapped around the heat roller, do not try to remove it yourself to avoid injuries or burns. Switch Off the machine immediately, and wait until it cools down.

Do not use conductive paper, e.g. folding paper, carbon paper and coated paper. When a paper jam occurs, they can cause a short circuit and fire.

Do not place any heavy object on the machine. An off-balance machine can tip-over or the heavy object can fall, causing damage and/or injuries.

Keep the room ventilated when using the machine for an extended period of time to minimize the ozone density in the air.

When copying with the document cover open, do not look directly at the exposure lamp. Direct eye exposure can cause eye fatigue or eye injury.

Pull out paper trays slowly to prevent injuries.

When removing jammed paper, make sure that no pieces of torn paper are left in the machine. A piece of paper remaining in the machine can cause fire. If a sheet of paper is wrapped around the heat roller, or when clearing a jammed paper that is difficult or impossible to see, do not try to remove it by yourself. Doing so can cause injuries or burns. Switch Off the machine immediately, , and wait until it cools down.

### **Consumable Safeguards**

Never heat the drum cartridge, or scratch its surface. A heated or scratched drum can be hazardous to your health.

Do not mix new and old batteries together, as they can burst or leak, causing fire or injuries.

Ensure that batteries are installed with correct polarity. Incorrectly installed batteries can burst or leak, resulting in spillage or injuries.

#### **Others**

- When clearing a paper jam or other fault, follow the appropriate procedure given in this manual.
- The machine has a built-in circuit for protection against lightning-induced surge current. If lightning strikes in your neighborhood, switch Off the machine. Disconnect the power cord from the machine and reconnect only when the lightning has stopped.
- If you notice flickering or distorted images or noises on your audio-visual units, your machine may be causing radio interference. Switch it Off and if the interference disappears, the machine is the cause of the radio interference. Perform the following procedure until the interference is corrected.
  - Move the machine and the TV and/or radio away from each other.
  - Reposition or reorient the machine and the TV and/or radio.
  - Unplug the machine, TV and/or radio, and replug them into outlets operating on different circuits.
  - Reorient the TV and/or radio antennas and cables until the interference stops. For an outdoor antenna, ask your local electrician for support.
  - Use a coaxial cable antenna.

### 2 Maintenance, Adjustments and Check Points

### 2.1. Preventive Maintenance

Preventive maintenance is performed at specific intervals and consists of machine cleaning and parts replacement.

It is essential to perform these service activities properly and at the specified intervals for customer satisfaction.

The purpose of this service is to maintain machine performance and image quality.

- You should prepare the necessary PM kits, replacement parts, and tools for cleaning beforehand.
- After completing the preventive maintenance service, you should discard the used parts and packaging, in accordance with local regulations and clean the surrounding area.
- Before servicing the equipment disconnect the power cord from the wall outlet.
- Before using solvents such as IPA (Isopropyl alcohol), put on rubber gloves and eye protection.

#### 1 Timing

- Perform the preventive maintenance service in accordance with the chart of preventive maintenance areas listed in the service manual.

#### 2 Cleaning of Rollers

- Rollers should be cleaned with water and cloth.
- Use of IPA (Isopropyl alcohol) should be used sparingly.

### 3 Precautions for Disassembly and Adjustment CAUTION!

Turn the Main Power Switch on the Back and the Power Switch on the Left Side of the machine to the OFF position, and then unplug the AC Power Cord from the wall outlet before disassembling the machine.

- After taking the unit apart, do not attempt to operate the machine.
- When operating the machine with covers removed, be careful to avoid clothing being caught by moving components.
- While electricity is applied, the connectors of any PC Board must not be connected or disconnected.
- Use of a vacuum cleaner for the cleaning of the TDC sensor could cause electrostatic damage, therefore, use a blower brush or cotton swab for the cleaning of these parts. Before vacuuming the developer unit remove the TDC sensor.
- When handling the drum, the precautions listed in section 3.3.
   should be followed.
- Make sure to use the correct screw sizes.
- Use toothed lock washers for the installation of ground wires to ensure electrical continuity.
- To re-assemble, reverse the sequence of disassembly, unless otherwise specified.
- Blown fuses should only be replaced with fuses of the same specified rating.

#### 4 Precautions for Handling Lasers

The laser optical system employed by this photocopier is completely sealed by a protective housing and an external cover. Therefore, the laser beam will not stray or leak during photocopier operation.

However, when servicing the photocopier, take the following precautions:

- 1. Do not insert into the path of the laser, any screwdrivers or other tools that have high reflectance properties.
- 2. Before servicing the photocopier, take off any watches, rings, or other metallic objects that you may be wearing. (This is to avoid the danger of the laser entering the eye by reflecting off the metallic objects being worn.)Since the laser beam cannot be seen with the naked eye, please follow the above precautions for maximum safety.

Refer to the Firmware Update Operation Instructions and Service Notes for Option Instalation (8.1, 8.2.) for the details.

#### 2.6.1. Firmware Configuration

#### A. Hardware Configuration

This machine is controlled by three (3) CPUs which are located on the System Control (SC) PC Board, the Panel Control (PNL) PC Board and the Scanner Printer Control (SPC) PC Board.

#### **B. SC PC Board Firmware**

The standard onboard Program Memory (F-ROM) mounted on the SC PCB is 4 MB. Two (2) Optional Expansion 8 MB Program Memory (FRM8 PCB) can be installed into SLOT 1 and SLOT 2. The Firmware to be written into the 4 MB onboard, the 8 MB of SLOT 1 / SLOT 2 depend upon the configuration of the Standard, PCL or PS Options.

### (1) Standard

The Standard Program is only written into the 4 MB onboard, which is assigned as ROM Code (A).

#### (2) For PCL Option

The PCL Control Program must be written into the 4 MB onboard, which is assigned as ROM Code

(B). The PCL Control Program (3) and PCL Font data (4) are written into the 8 MB in the SLOT 1. The Firmware (3) and (4) are assigned as ROM Code (C).

When using 8 MB Flash Memory Card, the 8 MB Program (C) can be written at once.

# E. Firmware Updating Ports

Three (3) types of Ports are available for updating the firmware.

# (1) Ethernet LAN Port (The Quickest and Most Reliable Way)

The machine's Firmware can be updated from a PC via Local Area Network (LAN). Refer to the Firmware Update Operation Instructions, Caution (8.1.) and Service Notes (8.2.) for the details.

(2) Parallel Port (Back up)

The machine's Firmware can be updated from a PC via Parallel Port. The Master Firmware Card can also be created from a PC via Parallel Port. Refer to the Firmware Update Operation Instructions, Caution (8.1.) and Service Notes (8.2.) for the details.

# (3) Flash Memory Card

The machine's Firmware can be updated using the Master Firmware Card. The Master Firmware Card can be created by copying the Firmware from an existing machine's SC PCB using a 4 MB or 8 MB Flash Memory Card.

It is required 5 Flash Memory Cards to update the SC, PNL and SPC PCBs.

# 2.6.2. Updating through a LAN Port (The Quickest and Most Easiest Method)

The firmware code can be easily updated when the main unit is connected to a LAN.

The Network Firmware Update Tool can also be used by connecting to the machine using a **crossover cable**, if the unit is not connected to a LAN.

# 2.6.8. Firmware Emergency Recovery

The easiest method to recover the firmware in an Emergency Recovery routine is to either use the Local Firmware Update Tool software by selecting the Independent File method, or using the Master Firmware Flash Card method (3 Flash Cards required).

Whichever method you select, it is easier to restore the machine's firmware to the Standard (AAV) Type first as it only requires 3 files to bring the machine to initial working condition. (Install the files in this order: SC, SPC and PNL).

After recovering, if optional PCL or PS/PCL firmware is required, use the Network Firmware Update Tool or the Local Firmware Update Tool to update the firmware to the required level.

If the unit does not boot up properly, follow the steps below:

- 1. Turn the power Off (use the power switch on the back of the unit, not the side of the unit).
  - Before proceeding to the next step, you must prepare either the Local Firmware Update Tool or create the Master Firmware Flash Cards (read the appropriate sections first).
  - If using the Master Firmware Card, insert the Master Firmware Flash Cards in the unit.
- 2. Turn the power On while holding the [ENERGY SAVER] button.
- 3. When the green lamp on the front panel turns On, release the [ENERGY SAVER] button.
  - If using the Master Firmware Card, the unit will start updating the Firmware code files automatically.

The unit is now ready to accept the firmware code from the Parallel Port or Master Firmware Card. Repeat the above steps if there are additional firmware code files to be updated.

# 4 Service Modes

## 4.1. Service Modes (For Copier)

These Service Modes are provided to assist the technician in checking for abnormalities in the copier and a means of making adjustments to the Input/Output of major components.

#### Caution:

The factory default parameters are preset (country dependent) for optimum performance and in compliance with the local telecommunication regulations/standards, and do not need to be changed. Changing some of these parameters may cause the unit to be no longer compliant or become inoperable.

#### 4.1.1. Service Mode Procedure

1. To select the Service Mode

The Service Mode is selected when "FUNCTION", "ORIGINAL SIZE (LEDGER/A3)" keys and "3" key on the keypad are simultaneously pressed, then F1 will appear in the display.

2. To exit the Service Mode

The Service Mode is reset when the "FUNCTION" and "C (CLEAR)" keys are pressed simultaneously.
